                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genes present in Neisseria meningitidis but not other Neisseria species - and related host cells, RNA, anti-sense sequences, polypeptide(s) and antibodies, useful for diagnosing Neisseria meningitidis infection and in protective vaccines
                                             sequences common to N. meningitidis and N. gonorrheae, but absent from N. lactamica, are responsible for colonisation and penetration of the mucosa. The DNA sequences can be used to produce probes and primers, a antibodies produced against the encoded proteins are used in standard hybridisation/immunoassay processes for diagnosis of N. meningitidis infection, particularly meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                AAV03518-53 represent sequences that are present in Neisseria meningitidis but not in N. gonorrheae or N. lactamica, except for the genes involved in biosynthesis of the capsule polysaccharide, frpA or C. opc, porA, rotamase, sequence IC1106, IgA protease, pillin, pilC, proteins which bind transferrin and opacity proteins. The sequences are proteins which bind transferrin and opacity proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 1998-110594/10.

                                                                                                                                                                                                                                         found on chromosome 22491, mainly (or within 20 kb) between tufA and pilT (region 1), pilO and lambda 740 (region 2) or argf and opaB (region 3). The DNA sequences are responsible for the differences in pathogenicity between N. meningitidis and N. gonorrheae, specifically they include the genes that allow N. meningitidis to cross the blood-brain barrier. DNA genes that allow N. meningitidis to cross the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11-JUL-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus pneumoniae. The present invention also describes an Streptococcus pneumoniae. The present invention also describes an Streptococcus pneumoniae. The present invention also describes an Streptococcus pneumoniae genome (SEQ ID NO:1 to 391) where the Cfragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the Cfragments of the S.pneumoniae produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any Cf the sequences in SEQ ID NO:1 to 391, identifying members of the Clibrary which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating Cf mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid colored shows enucleotide sequence is homologous to amplification for primers derived from the fragment of the S. pneumoniae genome to prime Cf the amplification and isolating the amplified sequences. The computer creadable medium can be used in a computer-based system for identifying capacity of the S. pneumoniae genome. Products of computer in the present invention can be used in diagnosis kits and assays, and Cf pharmaceutical compositions and vaccines for S. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection and meningitis. AAA05591 to AAA05614 represent primers used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome colours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression modulating fragments of the S. pneumoniae genome. Product from the present invention can be used in diagnosis kits and assays, pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4483 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 13
The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S. pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          6022
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5962
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5903

Claim 1; Page 575-593; 1409pp; English.

CC Streptococcus pneumoniae. The present invention also describes an CC isolated nucleic acid molecule encoding a homologue of any of the CC fragments of the S. pneumoniae genome (SEQ ID NO:1 to 391) where the CC nucleic acid molecule is produced by a process comprising: (a) screening CC a genomic DNA library using as a probe a target sequence defined by any CC of the sequences in SEQ ID NO:1 to 391, identifying members of the CC library which contain sequences that hybridise to the target sequence and CC library which contain sequences that hybridise to the target sequence and CC mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid CC mclecules whose nucleotide sequence is homologous to amplification CC molecules whose nucleotide sequence is homologous to amplification CC primers derived from the fragment of the S. pneumoniae genome to prime CC treadable medium can be used in a computer based system for identifying CC from the present invention can be used in diagnosis kits and assays, and CC pharmaceutical compositions and vaccines for S. pneumoniae. recorded on it, or a representative fragment or a sequence at least identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from The present invention describes a computer readable medium which the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) ĺ'n

Open reading frames (ORFs) of the genome encode polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can all be used to control growth of the microorganism. Chlamydia trachomatis responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal urteritis; epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         with the expression vector pADA431 to give pCPN533alpha. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide, polypeptide A. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, respectively, useful in the diagnosis of C. pneumoniae infection.

                                                                                                       C. pneumoniae polypeptide antigen variant fusion protein.

C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtll DNA library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma PJ/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA COBACA31 to give pcpNS33T. The plasmid was used to transform an E. coli host, which was cultured to give an antigenic polypeptide from its DNA can be used in assays for the detection of the antigenic polypeptide antigenic polypeptide antibodies and DNA, respectively, useful in the diagnosis of C. pneumoniae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                              28-APR-1995;

The present sequence encodes a variant of the C. pneumoniae polypeptide antigen, polypeptide A. C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtll DNA library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma P3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused

C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtll DNA c. library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma P3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused with the expression vector PADA431 to give pCPN533alpha. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide, polypeptide A. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, crespectively, useful in the diagnosis of C. pneumoniae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C. pneumoniae polypeptide antigen (polypeptide A) DNA clone 53-3S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptide antigen; polypeptide A; strain YK41; plasmid; probe; pCPN533alpha; primer; assay; detection; antibody; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HITB ) HITACHI CHEM

C. pneumoniae strain YK41 was C cultured and genomic DNA extracted to prep. a lambda gtl1 DNA C library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma p3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused with the expression vector pADA431 to give pCPNS33alpha. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide, polypeptide. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, crespectively, useful in the diagnosis of C. pneumoniae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used

                                                                                                                                                                         US-09-889-314-2
                                                                                                           Percent Similarity:
                                                                                                                                                                                            The present sequence ia an expression vector for the C. pneumoniae polypeptide antigen, polypeptide A. C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gt11 DNA ibrary was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma P3/NSI/1-A94-1 to produce a MAb expression hydridoma. The DNA obtd. was then fused with the expression vector pADA431 to give pCPNB33alpha. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide, polypeptide A. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, respectively, useful in the diagnosis of C. pneumoniae infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20-SEP-1994;

C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtll DNA library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma P3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused with the expression vector pADA431 to give pCPN533alpha. The plasmid was used to transform an E. coli flost, which was cultured to give the antigenic polypeptide, polypeptide A. Polypeptide A and primers and probes derived from its DNA can be used in assays for the detection of polypeptide A antibodies and DNA, respectively, useful in the diagnosis of

                      C. pneumoniae polypeptide antigen fusion protein, polypeptide B.
C. pneumoniae strain YK41 was cultured and genomic DNA extracted to prep. a lambda gtl1 DNA library. The library was then screened with an anti-YK41 monoclonal antibody (MAb), which was prepd. by fusing spleen cells from a mouse infected with YK41 with myeloma p3/NS1/1-Ag4-1 to produce a MAb expressing hydridoma. The DNA obtd. was then fused with DHFR DNA and the expression vector pADA431 to give pCPM533T. The plasmid was used to transform an E. coli host, which was cultured to give the antigenic polypeptide fusion protein, polypeptide B. Polypeptide B and primers and probes derived from its DNA can be used in assays for the detection of antigenic polypeptide antibodies and DNA, respectively, useful in the diagnosis of C. pneumoniae infection.

                                                                                                                                                                                                                                                                                                                             The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY345847-25879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs

The protein, immunogenic fragments of it, nucleotide sequences encoding it, or inhibitor specific against it are used to manufacturing a medicament for the treatment of infection due to C. pneumoniae. An antibody specific against the protein can diagnose a C. pneumoniae infection. C. pneumoniae infection can be prevented. Artherosclerosis, including coronary atherosclerosis, caused by C. pneumoniae can also be prevented or treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New Chlamydia pneumoniae protein of 496 amino acids preventing and treating C. pneumoniae infection and including coronary atherosclerosis -
